

Nearly 80 firefighters participated in the May 17 safety exercises.

05. June 2018

On May 17, nearly 80 fire fighters from the local Aarberg fire brigade participated in a day of safety exercises focused on rescuing people with the use of self-contained breathing apparatus. This involved activities at eight different sites at the Swiss plant.

Heinz Grau and Ulrich Heckes from Siegwerk internal intervention forces were supported by the local fire brigade with the planning and execution of potential facility incidents. An excellent safety record is one of the key reasons Aarberg received

a perfect score in their recent Workplace Conditions Assessment audit.

Firefighters inspect and fit hoses as part of the five-hour-long event.
